## New Year #resolution re AI generated content

In 2026, I will unfollow/unsubscribe/ignore or, at a minimum, not “like” or otherwise not boost authors that rely on #AI to produce “their” content (authors?).

On different platforms, like many of us, I increasingly come across text that appears to be interesting, logical and making sense. But then I don’t buy the argument. Why?

Because AI-generated content has no soul, is synthetic, has the ductus of a machine. The author is not the one signing the post.

And if I don’t trust the source, I don’t trust the content.

Do we need a sort of "No AI - 100% manual" (self-)certification for posts and articles?

PS: Testing this I asked AI to transform some 200 pages of notes that I had on a particular topic into a 5000-word article for publication. The result was beautiful, catchy, logical and polished, with fancy terminology I didn’t even know existed. But it had no credibility, it was not me, and so I scrapped it.
